Future of Gaming: Metaverse, Web3, AI, and/or NFTs

Joe Cutler was a panelist in this session, which was a deep dive into the future of gaming and the exploration of the innovations that will affect the industry. Presenters explored how artificial intelligence (AI), the metaverse, blockchain gaming, and non-fungible token (NFT) trends play a vital role in shaping the future of Web3 and gaming. The panel discussed how video game developers and other media and entertainment companies will need to transform to monetize their content in the digital age and the potential legal and regulatory hurdles to be considered and addressed.
