

Singapore Greenlights Cell-Based Meat; When Will the U.S.?

In a global first, in recent days, Singapore greenlighted the marketing of a cell-based meat product for human consumption. The approval represents an inflection point in the rapid rise of alternative proteins around the world.

In contrast to plant-based meat, which mimics the organoleptic characteristics of real meat but uses proteins from plants, cell-based meat is actually meat tissue produced without animal slaughter. Also known as cultivated meat or cell cultured meat, cell-based meat is intended to replicate the organoleptic, nutritional, and compositional characteristics of meat tissue harvested from food-producing animals.
