

Magic Waves

Michael Glenn and Colin Fowler talk with Gene Dolgoff, CEO at Holobeam Technologies Inc., about applications of holograms and wave interference to achieve the "teleportation" of energy. Gene has developed an array of wave emitters that align waves in such a manner that causes destructive wave interference where energy is not desired and constructive interference where the energy is desired. Among other uses, the selective effect of coordinated wave interference enables the removal of cancer cells without harming surrounding, healthy tissue.
